Solution Center for Nutrient Management

Welcome!

Welcome to the Solution Center for Nutrient Management, a project of the [UC Sustainable Agriculture Research and Education Program](#). This website is a resource in development for farmers, consultants, and researchers to find easy to digest information and connect with one another about nutrient management practices.

UPDATE! We are holding an online discussion forum on Nutrient Management in times of Drought with FarmsReach November 17th-30th. Join the conversation [here](#).

This resource is in the early stages of development, so please explore the site to see the features will be included, and come back often for new resources.

If you are an UC researcher working on nutrient management issues that you'd like to see on this site, please [contact us](#).

Farmer Perspective

Farmers throughout California who think carefully about nutrient management can serve as important examples for how to incorporate successful practices into a farm operation. Read case studies of farmers with skilled approaches towards nutrient management. Learn about the challenges they face, and how their practices adapt over the years.

Online Discussion Forum

We host online discussion forums to help farmers and service providers get answers to topic-specific nutrient

The Solution Center for Nutrient Management, hosted by the UC Sustainable Agriculture Research and Education Program, serves to help growers and agriculture professionals better access information and resources pertaining to nutrient management.

The Solution Center is comprised of virtual and in-person engagement efforts meant to increase the accessibility of university research and create opportunities for farmers and researchers to engage in discussion around specific topics pertinent to California agriculture.

We are building a database of information and resources about nutrient management. If you have resources (fact sheets, PowerPoint presentations, journal articles, videos, etc.) that you would like included in the database, please contact Ryan Murphy at rmurphy@ucdavis.edu. The Solution Center can also serve to build outreach.

In 2015, we'll be hosting online discussions, in-person field days, and building our website of resources. Please visit the website and share this growing resource with your constituents. http://ucanr.edu/sites/Nutrient_Management_Solutions/.
